The Wolfspeed RF Difference

Powering More. Consuming Less.™

For the past 30 years — first as a division of Cree and now as Wolfspeed — we have only focused on one thing: perfecting wide bandgap semiconductor technology. No one has more experience or expertise in the development and commercialization of Silicon Carbide (SiC) and Gallium Nitride (GaN). As the largest American producer of GaN on SiC RF wafer processing technology, Wolfspeed's GaN HEMTs and MMICs enable enhanced innovation, performance and efficiency across a broad spectrum of RF and microwave applications for both the commercial and military sectors.

In 2018, we announced new LDMOS and GaN HEMT product offerings with Wolfspeed's acquisition of Infineon's RF power business. The expanded product portfolio accelerates the company's progress in developing innovations for telecommunications and aerospace/defense applications.

WOLFSPEED'S GaN COMPONENTS enable next-generation electronics systems that are the best-in-class in efficiency and performance, including the lowest Failure-in-Time (FIT) rate in the industry.

WOLFSPEED'S LDMOS COMPONENTS portfolio, now with LD12, delivers on the promise of continued innovation for cellular applications such as improved 4G networks and the shift to 5G networks.

WOLFSPEED'S FOUNDRY SERVICES turn your designs into a faster, more reliable reality. As leaders in GaN on SiC MMIC technology, we have the design assistance, testing and support to realize your specifications from initial development to recurring production. Plus, as a volume supplier, we can do it with faster cycle times, higher first-pass design success and greater reliability than any competitor.

Each day the world's electronics, industrial and communications sectors become more interconnected by evolving RF technologies. In offering the world's most efficient and highest performing RF devices and Foundry Services, Wolfspeed is making any vision possible.

Discrete Transistor Die

We offer families of GaN on SiC HEMTs for RF designers to customize the performance of their RF power amplifiers. Bare die offer maximum flexibility, making them ideal for designers wanting to make hybrids and modules.

Here is a list of discrete FETs operating at 28, 40 and 50 V with power levels ranging from 6 W to >300 W.

Internally Matched, Packaged Discrete Transistors

By moving some of the matching from the circuit board closer to the GaN on SiC HEMT bare die, the performance of the packaged transistor improves. As a result of the matching, the frequency of operation becomes application specific. The internal matching also makes the amplifier PCB design easier, especially when the packaged device is matched to 50-ohms on the input and output pins.

Here is a list of products matched for communications and radar applications ranging from L-band through X-band.

Our Commercial Products

Cellular Infrastructure RF Power Transistors (400 MHz to 3500 MHz)

We offer a broad portfolio of RF power transistors for use in the design of cellular base station amplifiers. Engineered to support all cellular standards and frequency bands, our products are enabling the next generation of 5G cellular solutions with state-of-the-art GaN on SiC and LDMOS transistors. Key features include high-power Doherty designs, ease of use with DPD systems, open-cavity and plastic package options and reference designs.

General Purpose RF Transistors (900 MHz to 2200 MHz)

Our general-purpose transistors are unmatched for flexibility in use over a broad frequency range while providing high-power outputs. These products offer high gain, efficiency and linearity performance in a cost-effective overmold plastic package.

UHF, L-Band & Broadcast RF Power Transistors (400 MHz to 1400 MHz)

For designers wanting high-performance HEMTs with industry-leading reliability, we offer a line of packaged GaN on SiC HEMTs with no internal matching. These are packaged versions of the discrete HEMT die. Packages available include metal-ceramic and plastic overmold.

Our Commercial Products

Packaged MMIC Power Amplifiers

This line of GaN on SiC MMICs is matched to 50-ohms in/out for the smallest-sized power amplifiers for a given output power and application. They are matched for specific applications and frequency bands—from L-Band to Ku-Band.

Our Product Solutions

RADAR Line Up

Need kilowatts of power? We have devices for each stage of amplification - pre-driver, driver and output stages. Here are some line up suggestions for popular radar bands. If you do not see your frequency band from the line ups below, then feel free to contact us for recommendations for radar solutions from UHF to X-Band.

L-BAND Solutions >1 kW, $V_{DD} = 50\text{ V}$

S-BAND Solutions >1 kW, $V_{DD} = 50\text{ V}$

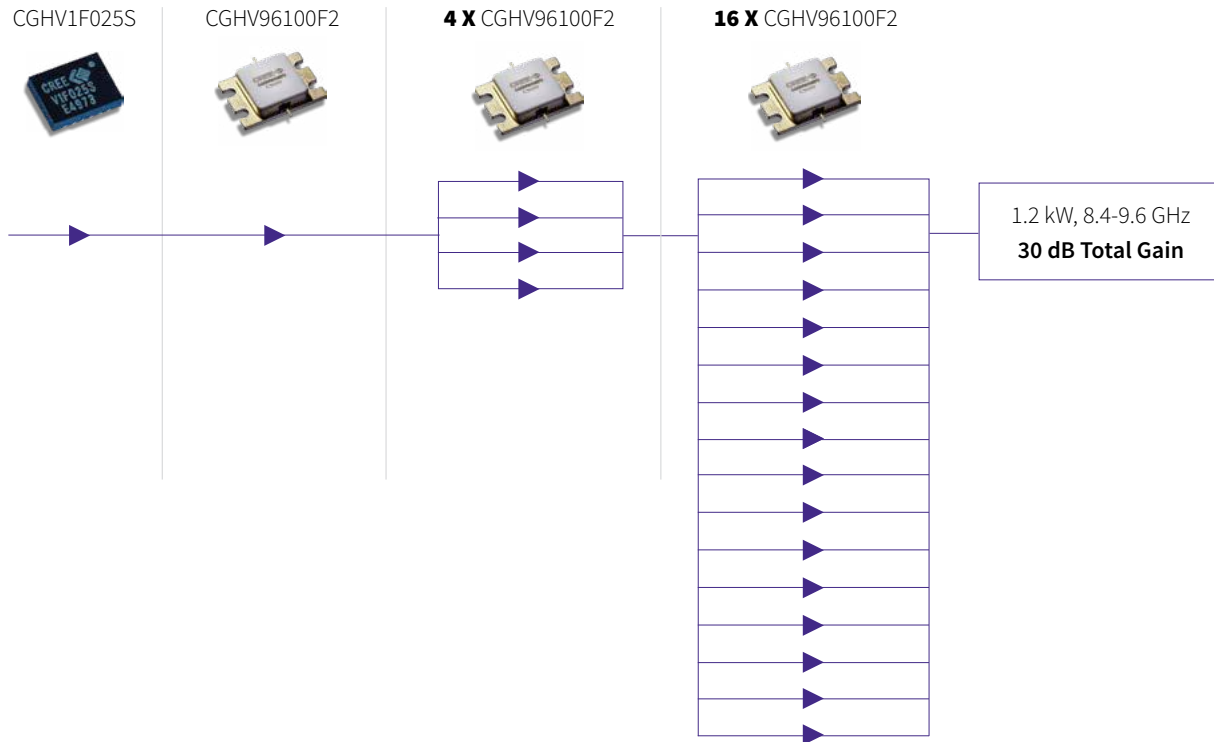

C-BAND Solutions at 1 kW, $V_{DD} = 50\text{ V}$

X-BAND Solutions >1 kW, $V_{DD} = 40\text{ V}$

MILCOM Line Up

In addition to recommendations for Radar power amplifier solutions, we offer line ups for several other power amplifier applications. One example is this solution for tactical radios with operating frequencies from 0.5-2.7 GHz. This is a linear communications amplifier solution using unmatched discrete GaN HEMTs.

100 W, 0.5-2.7 GHz, $V_{DD} = 50\text{ V}$
